

Loading or unloading is made easy with **CARPET•TUG**, simply by attaching the wire rope to a webbing harness looped around the end of the roll.

EUROPEAN PATENT NO. 98 303456.2
™ CARPET•TUG IS A REGISTERED TRADEMARK OF THE BHW GROUP.

OPTIONAL EXTRA

BHW FM•CONNECT REMOTE CONTROL SYSTEM – CONTACT SALES FOR DETAILS.

CARPET•TUG Unique Winching System

FEATURES INCLUDE

- *Easy to install*
- *Simple to operate*
- *Enables one person to load or unload heavy rolls*
- *Reduces risk of back injury and loss of man hours*
- *Fits any vehicle size with simple bolt fixing*

HELPS TOWARDS COMPLIANCE WITH EU MANUAL HANDLING REGULATIONS

Take the backache and risk of injury away from loading and unloading larger, heavier rolls of carpet by installing the **CARPET•TUG** winch system into any delivery vehicle.

Back problems account for a high percentage of working days lost to industry, particularly in the carpet business.

Compliance with EU Manual Handling Regulations means that companies often have to send more than one man to make deliveries in order to overcome the difficulties associated with manoeuvring and lifting heavy rolls of carpet.

Installation of a CARPET•TUG system provides all the help one man needs and therefore pays for itself very quickly.

ADJUSTABLE TO FIT ANY VEHICLE BODY WIDTH

The winch system is housed inside the slim beam, which is adjustable to suit any body width.

A cleverly designed central rotator allows the rope to pass in any direction outside or inside the vehicle.

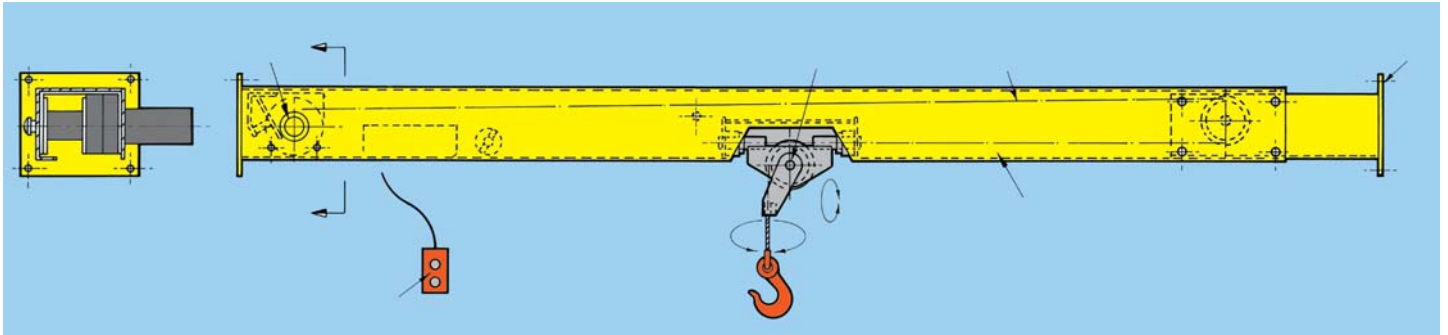

The operator controls the winch with a wanderlead, long enough to enable him to operate from either inside or outside the vehicle.

The winch can move rolls of carpet of up to 400kg in weight.

Wanderlead supplied with auxiliary remote socket. All moving parts run on maintenance free nylon bushes for cleanliness and prolonged life. Paint finished in yellow.

EASY TO INSTALL...

This quick-to-fit system comes complete, ready to fix with just 8 bolts!

The slim beam is adjustable in length to suit any vehicle body width, and robust enough to resist impact damage.

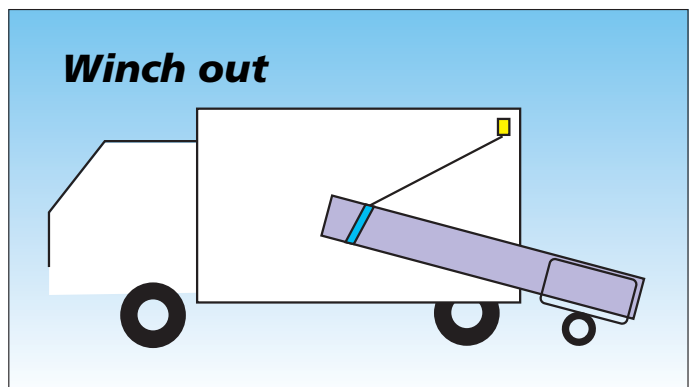

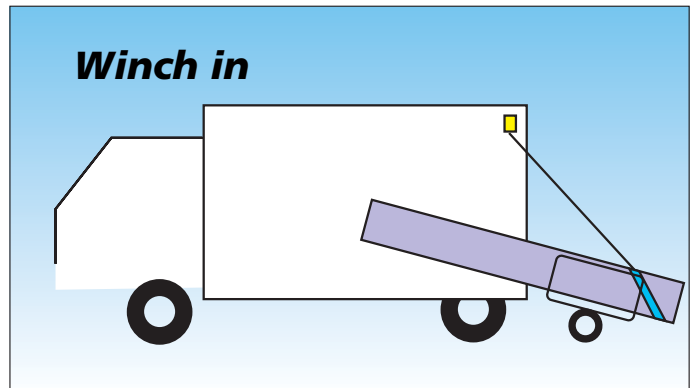

It also houses the electrics, including an isolator switch.

Power cables are routed from the vehicle's battery and secured into the heavy duty connector provided.

The centrally positioned rotator enables the rope to pass in any direction so that carpet rolls can be moved from any point on the vehicle.

The system's design ensures neat wrapping of the wire rope onto the drum. The winch features a freespool clutch mechanism which means the rope can be pulled off the drum quickly by the operator, rather than powered off.
